```
 __      _____ _____ _____ _____ _____ ____  _____
|   |  |    __|     |   | |  _  | __  |   \ |     |
|   |__|    __| | | | | | |     |    -|   | |  |  |
|_____|_____|_____|_|___|__|__|__|__|___/|_____|
                                                    v. 0.1
```

build it

- npm install

- ./node_modules/malta/src/bin.js build.json

- open index.html

Create a new object simply calling the Leonardo function:

```
var L = Leonardo (300, 200, {id : "trial"});
```

parameters:

- **width** : the width in pixels (required)
- **height** : the height in pixels (required)
- attrs : an hash of required attributes for the <svg> tag

for *svg namespaces* is enough just to pass a ns element containing an array containing one or more from the following set :

```
['cc', 'dc', 'ev', 'rdf', 'svg', 'xlink']
```

if all are needed is enough to pass '*'.

... to be continued ...
